

$$\frac{n}{2} - \rho$$

$$\frac{n}{2} = ek_F^3/6\pi^2$$

$$k_F R$$

The figure is a plot of the quantity $\frac{n}{2} - \rho$ on the vertical axis against $k_F R$ on the horizontal axis. A horizontal line is drawn at the level where $\frac{n}{2} = ek_F^3/6\pi^2$. The curve begins at the origin (0,0), increases monotonically, crosses the horizontal line, reaches a maximum, and then decreases, crossing the horizontal line again and ending at a local minimum.
